1996 October 3 - El Paso, Texas

It is still problematical as to whether there was actually a crash in the South West connected with this event. However as the original "official" explanations had this event inextricably joined at the hip with [crashes in California later the same night](#), it seems appropriate to list it as a separate event.

Plus of course, the [video](#) looks nothing like the "meteor" that was offered as the official explanation - least of all to the ABC cameraman (Bob Thomas of KTSM) who shot it while filming a High School football game - see [California report](#) for full story.

Frame "grabbed" from Bob Thomas' video

Up to 16 different elements can be observed on analysis
